Hydrojet Signs & Fabricating

Hydrojet

Signs & Fabricating

Division of
Glass Components, Inc.

For All Your Cutting Needs

About Hydrojet

Hydrojet Signs & Fabricating is a division of Glass Components, Inc. Located in East Central Indiana, our main focus is to create unique and one of a kind signs to meet our customers needs. We cater to all markets- residential or commercial.

The detailed signs we make are cut by a waterjet. This is a CNC machine that cuts with ultra high pressure water about 50,000 psi and garnite. Garnite is a type of sand and is a very precious stone. The high pressure water and garnite flows through a diamond orifice with a very small hole of .043 causing the water to come out of the cutting head at mach 3 speed.

With a waterjet machine we can cut almost any material without producing any heat build-up. A few materials we have cut are granite, plastic, glass, marble, metal, rubber, and many more. The waterjet can also cut certain materials up to 6 inches thick.

We can produce just about any type of sign. We have thousands of pictures to choose from and if we don't have it we can custom create your design. We can make signs for your personal needs such as home décor, welcome signs and last names. Family names and years established make great anniversary or wedding gifts. Farm and ranch signs, businesses, 4-H signs including your child's name inside the animal that they are showing, mailbox toppers, banners and archways, park benches, and many other unique items.

All of our standard signs are made out 16 gauge metal (.060) material and all bigger sign are made out of 11 gauge metal (.119), unless the customer requests any different.

Another option we offer is any metal sign we create can be powdercoated (painted).

Pictured here is the waterjet machine used to create the pieces we produce.

A Few of Our Pieces

*Agricultural
&
Farm*

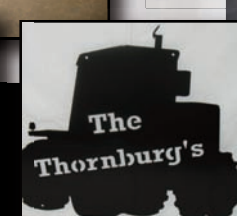

Business

All signs are made to customers specifications for things such as:

- Yard Signs
